

INDICATIONS AND USE OF YOUR MONOJECT SYRINGE

For our patients we provide a monoject syringe as an aid to good oral hygiene after tooth extractions.

AFTER ONE WEEK

- Begin to gently irrigate surgical site with luke warm or cool clean salty water.
- You will find a small opening just behind and to the cheek side of the last molar.
- Gently irrigate 2 to 3 times a day for 5 to 10 days.
- You might notice food particles or minor bleeding coming from the socket site.
- Do not rinse too hard or you will delay the healing.
- Bottom teeth tend to be much more of a problem than the upper teeth therefore it may not be necessary to rinse the top sockets at all.

IF YOU HAVE ANY PROBLEMS PLEASE CALL US AT THE NUMBERS BELOW OR CALL YOUR DENTIST:

Office Hours: 8:00am - 4:00pm (250) 753-6671

Evenings and Weekends: (250) 754-2141 (Hospital #) and ask for the oral surgeon on call to be paged.
